At last a solution for stretch marks but not only...

Le Modeling Blooméa is a **three-step skincare** device developed ten years ago by **French aesthetic surgeons**.

It helps to reduce dramatically the appearance and texture of **stretch marks** living a bright and unified skin. The treatment was then progressively applied to many other skin problems such as **acne scars, skin lesions, sun marks, melasma, neckline furrows, etc.**

The procedure was thus naturally extended to regular beauty treatments aimed at maintaining and **refining the skin texture, tightening pores, reducing wrinkles and enhancing skin complexion.**

One device, three actions...

The three actions of Modeling Blooméa

MACRO-EXFOLIATION

Macro-exfoliation works thanks to the action of a single-use sealed tip fixed on the hand piece that will go into **high frequency oscillations**. The exfoliating surface **erases imperfections layer by layer to smooth and unify the complexion**. It is a completely painless friction and vibration process.

MICROVIBRATIONS

A few drops of the Blooméa cream are applied on the skin. Then begins a pleasant **massage by high frequency Microvibrations** that **stimulates** the skin in depths, and **increases the production of elastin and collagen to tighten and tone the skin**.

LIGHT THERAPY

A light is emitted from the hand piece during the whole treatment. The active wavelength on the skin is closed to red (633 nm). It **reinforces the regenerative effect of both Macro-exfoliation and Microvibrations massages**.

A French rewarded technology

Over the last decade, Le Modeling Blooméa has become a reference in skincare treatments. A recent study realised in France between 2012 and 2014 over 173 people has revealed a **high satisfaction rate of 94%**.

Each treatment is performed with the use of **single-use sealed tips** to meet with strict hygiene requirements.

Qualified as a very "skin care treatment revolution", Le Modeling Blooméa was awarded the **Paris 2015 Innovation Prize** at the "Congrès International d'Esthétique Appliquée".
