# BeyondPodiatry

the next step in footcare

## Adults, Children, Diabetics and Athletes Don't suffer in silence!

The average person takes 8,000 -10,000 steps a day, but you only need to take one step towards healthier feet.

At Beyond Podiatry our experienced team offers an extensive range of treatments for all ages and conditions, from the smallest callous to the most complex biomechanical issues.

We employ the latest foot pressure and gait analysis technology allowing us to correctly contour and fit orthotics and innersoles designed to align the foot and body and therefore ease foot, ankle, back, hip and knee pain.

Children need quality foot care just as much as adults. Problems can range from flat feet to toe-walking. As recognised experts in the treatment of childrens' foot problems, our podiatrists are here to help.

For specialised conditions such as sports injuries or diabetes related problems, professional and personalised treatments are available, including Diabetic Foot Assessments and Management Care Plans available in consultation with your doctor.

Patients who are on an Enhanced Primary Care Plan can claim part of their consultation fee back through Medicare.

**Beyond Podiatry has been putting it's best foot forward for over 18 years - make it your next step in footcare!**
